Research, Hvidovre University Hospital

Assistant professor, Department of Public
Health, Nursing, Aarhus University,
Denmark

Associated professor, at University of
Southern Denmark

DISPOSITION

- Forståelse for hvorfor tiltag og interventioner ikke altid virker i praksis selv når der er vist effekt i kliniske studier
- Forståelse for at implementering er et helt forskningsfelt for sig selv
- Forståelse for vigtigheden af at tænke implementering af interventionen ind i fra den gode ide eller design fasen af studier/projekter
- Greb til praktisk implementering

Evidens er gennem tiden tillagt store perspektiver for fremtidens velfærd. Det anses for at være en forudsætning for at sikre højere faglig kvalitet i sundhedsvæsenet. De enkelte afdelinger og organisationer forventes at transformere sig til evidensbaserede praksisser (EBP). Det vil sige, at de sundhedsprofessionelle har opbygget kulturelle vaner om at lade sig rådgive på baggrund af evidens og hvor brugen af evidens er knyttet til implementering, som kobles til et omfattende dokumentationssystem og standardisering i form af screeninger og retningslinjer. Denne afhandling sandsynliggør, problemer med implementering af den evidensbaseret viden i plejen og behandlingen af patienterne og argumenterer for, at det har både menneskelige og samfundsmaessige konsekvenser.

Afhandlingen undersøger forbindelserne mellem evidensbaseret viden og implementering af den, i lokal praksis i sundhedsvæsenet. Formålet med projektet er at forstå og forklare kulturs betydning for implementeringen af screeninger og retningslinjer i en Akutmodtagelse på et af Region Hovedstadens hospitaler.

Metodisk er dette grebet kvalitativt an, i form af et etnografisk feltarbejde, forskellige typer interviews og en workshop. Afhandlings teoretiske afsæt er fra kulturhistorisk virksomhedsteori hvorfra forfatteren udvikler begreberne flow kultur og flow-stoppare, som danner baggrund for at forstå hvordan implementeringen af screeninger og retningslinjer in- og ekskluderes i Akutmodtagelsen. Afhandlingen konkluderer, at flow kultur arbejder med og mod implementering og brug af evidensbaserede screeninger og retningslinjer - afhængigt af hvorvidt de sundhedsprofessionelle opfatter denne viden som en fordel for flow eller som en flow-stopper.

Flow-stoppare i form af evidensbaserede screeninger og retningslinjer øger risikoen for eksklusion, og implementeres derved ikke. Yderligere fremhæver forfatteren, vigtigheden af at kende til lokal kultur og kontekst, når implementeringen af evidensbaserede screeninger og retningslinjers skal iværksættes, samt at evidensbaserede screeninger og retningslinjers langtræ er hverken objektive, neutrale eller akontekstuelle artefakter. Udenfor disse grundlæggende præmisser for implementering, viser afhandlingen at præmisserne ikke kun gælder i Akutmodtagelsen, men rækker på tværs af forskellige sektorer.

Closing the gap: advancing implementation science through training and capacity building

Ross C. Brownson^{1,2*}, Leopoldo J. Cabassa³, Bettina F. Drake² and Rachel C. Shelton⁴

Abstract

In their article on "Navigating the Field of Implementation Science Towards Maturity: Challenges and Opportunities," Chambers and Emmons describe the rapid growth of implementation science along with remaining challenges. A significant gap remains in training and capacity building. Formats for capacity building include university degree programs, summer training institutes, workshops, and conferences. In this letter, we describe and amplify on five key areas, including the need to (1) identify advanced competencies, (2) increase the volume and reach of trainings, (3) sustain trainings, (4) build equity focused trainings, and (5) develop global capacity. We hope that the areas we highlight will aid in addressing several key challenges to prioritize in future efforts to build greater capacity in implementation science.

Keywords Capacity building, Competencies, Equity, Implementation science, Sustainability, Training

In their insightful editorial, Chambers and Emmons provide a brief history of implementation science (IS) and opportunities to expand the reach and impact of our field mentoring opportunities across 13 countries [2]. Capacity building for IS occurs in multiple formats including university degree programs, summer training institutes,

Hvad er implementering (-forskning)?

”Implementering handler grundlæggende om at omsætte ideer og planer til konkrete handlinger”
(Poulsen RL et al., 2011).

Abstract

Implementation research is the scientific study of methods to promote the systematic uptake of research findings and other evidence-based practices into routine practice, and, hence, to improve the quality and effectiveness of health services and care. This relatively new field includes the study of influences on healthcare professional and organisational behaviour.

Implementation Science will encompass all aspects of research in this field, in clinical, community and policy contexts. This online journal will provide a unique platform for this type of research and will publish a broad range of articles – study protocols, delphi, thematic and case studies, reviews, rigorous evaluations of interventions, change, and articles on methodology and rigorously developed tools – that will enhance the development and refinement of implementation research. No one discipline, research design, or paradigm will be favoured.

Implementation Science looks forward to receiving manuscripts that facilitate the continued development of the field, and contribute to healthcare policy and practice.

HVORFOR?

“Much of the US\$ 200 billion/year worldwide investment in biomedical and health research is wasted because of dissemination and implementation failures!”

Chalmers I, Glasziou P. Avoidable waste in the production and reporting of research evidence. *Lancet* 2009; **374**: 86–89.

Macleod MR, Michie S, Roberts I, Dirnagl U, Chalmers I, Ioannidis JPA, m.fl. Biomedical research: increasing value, reducing waste. *The Lancet*. januar 2014;383(9912):101–4.

Chassin MR, Galvin RW. The urgent need to improve health care quality. Institute of Medicine National Roundtable on Health Care Quality. JAMA 1998;280:1000-5.

Graham ID, Kothari A, McCutcheon C. Moving knowledge into action for more effective practice, programmes and policy: protocol for a research programme on integrated knowledge translation. Implementation Sci. December 2018;13(1):22.

HVORFOR?

- 90 % af alle ressourcer bruges på at skabe interventioner, politikker, programmer – blot 10 % bruges på implementering
(Ogden, 2010; Levin, 2011).
- Blot 5 % af alle kommunalt iværksatte projekter i Danmark har tildelt økonomi til implementeringen, og få projekter følges op med strategier og handleplaner for implementering = derfor ender mange projekter på de kommunale skriveborde
(Nielsen & Poulsen, 2011)

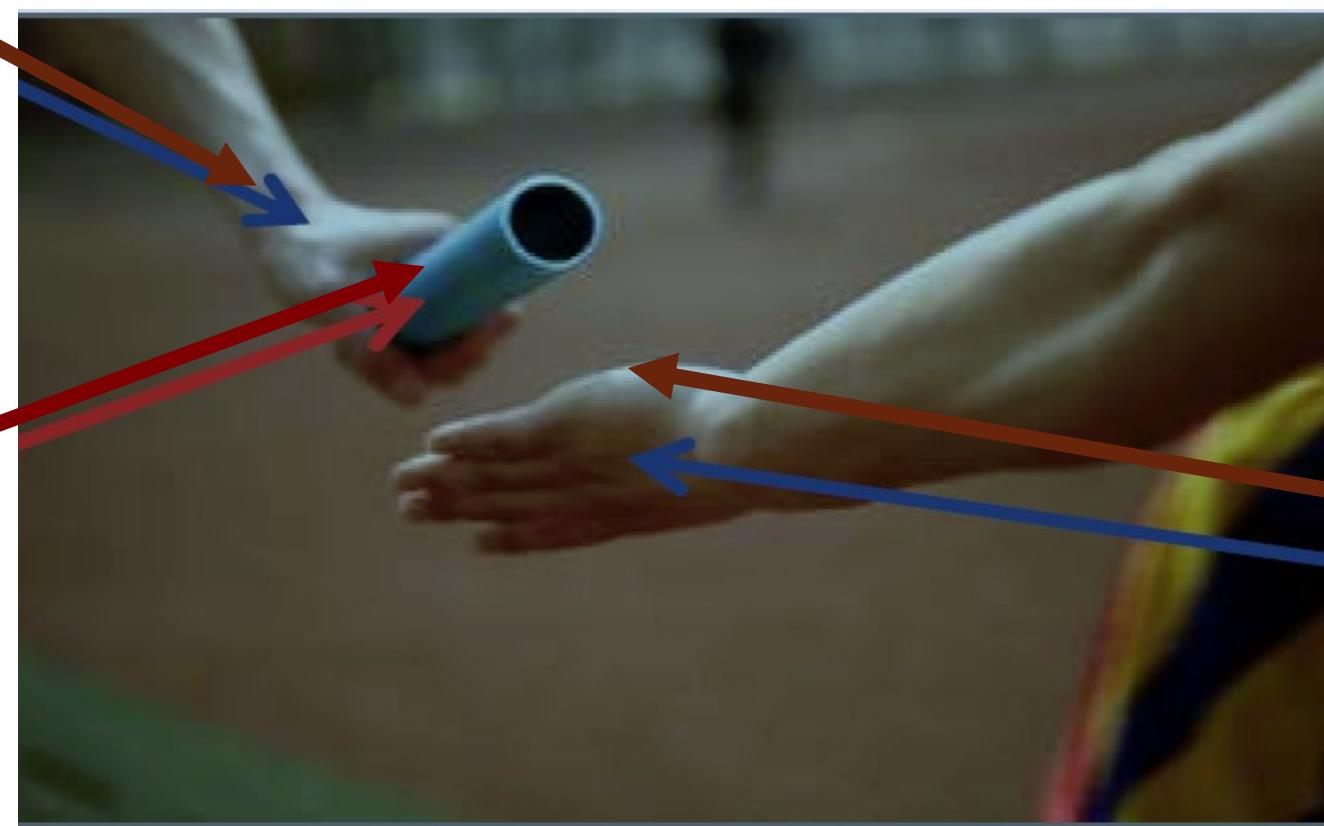

Hvorfor virker interventioner ikke altid i praksis når der er vist effekt i kliniske studier?

TRADITIONEL PIPELINE MED ANALOG TIL ET STAFETLØB:
“HER... GO! GO! GO!”

“Klinisk forsker”

Interventionen
“klar til at blive spredt
og implementeret”

“Implementering i
praksis”

Hvorfor virker interventioner ikke altid i praksis når der er vist effekt i kliniske studier?

KOMPLEKSITETEN AF TILTAGET

- Her menes mængden af elementer i tiltaget. Et komplekst tiltag vil kræve mange ændringer i organisationen og hos målgruppen for at implementeringen lykkedes.
- Jo mere komplekst tiltaget er, jo flere ændringer er nødvendige. Litteraturen peger på, at jo mere kompleks et tiltag er, jo sværere er det at få den implementeret.

Klinisk eksempel

- Gennemgang og komprimering af retningslinjen?
- Retningslinjen / komprimerede udgave skal ind i VIP, SP og andre relevante teknologier?
- Retningslinjen vedrører særligt kirurger (pladsskabende operation under skulderhøjten)
- Plejepersonaler i forbindelse med armslynge, smertebehandling osv.
- Praktiserende læger/læger (behandling med glukokortikoid (blokade))
- Terapeuter kommunalt/privat træningsindsatser (superviseret træning og selvtræning)

Hvorfor virker interventioner ikke altid virker i praksis når der er vist effekt i kliniske studier?

- Alle effektivitetsstudier bruger "implementeringsstrategier" til at understøtte leveringen af interventionen; vi plejer bare ikke at kalde dem det...
- Vi "ved", at nogle/mange af de strategier, der bruges i effektivitetsstudier, ikke er gennemførlige til at understøtte udbredelsen og implementeringen af intervention bagefter-

Betalende klinikker, betaling af dem der gennemføre interventionen, betaling for pleje, intensiv træning, hyppige fidelitetstjek...

MEN, vi kan lære af brugen af disse strategier under studiet!

IMPLEMENTERINGSPROCESSEN

Paulsen Rønnow, L., Marckmann, B.,
Sundhedsstyrelsen, 2010.
Implementeringsforskning om
forebyggelse: en baggrundsrapport.
Sundhedsstyrelsen, København.

1.BUDSKAB

Tænk altid implementeringen ind fra starten af den gode ide, design af jeres projekt eller forandring.

FORSKELLEN PÅ TILTAGET OG IMPLEMENTERINGEREN AF TILTAGET

(KLINISK FORSKNING OG IMPLEMENTERINGSFORSKNING)

Bauer & Kirchner, 2020:

“...the goal of implementation science is not to establish the health impact of a clinical innovation, but rather to identify the factors that affect its uptake into routine use.”

FORSKELLEN PÅ TILTAGET OG IMPLEMENTERINGEREN AF TILTAGET

(KLINISK FORSKNING OG IMPLEMENTERINGSFORSKNING)

Tiltaget/ klinisk interventionsforskning

Forskning fokuserer på et outcomes fra en klinisk intervention

- på et niveau af patienter, klienter, servicebrugere
- eller på befolkningsniveau

Implementering/implementeringsforskning

Forskning fokuserer på et outcomes fra en "implementeringsstrategi, strategier eller proces(ser)"

... på et niveau af medarbejdere, teams eller organisationsniveau

FORUDSÆTNINGER FOR IMPLEMENTERING

- Faktorer der ligger før en beslutning om at implementere en bestemt indsats eller program.
- Fx forståelse af implementering, tid, økonomiske ressourcer, brugen af evidensbaseret viden og rammebetingelser (fx juridiske/formelle rammebetingelser).
- Determinantanalyse med formålet:
 - Screene for barriere/facilitatorer
 - ‘Tailored’ jeres tiltag og/eller implementeringsstrategier

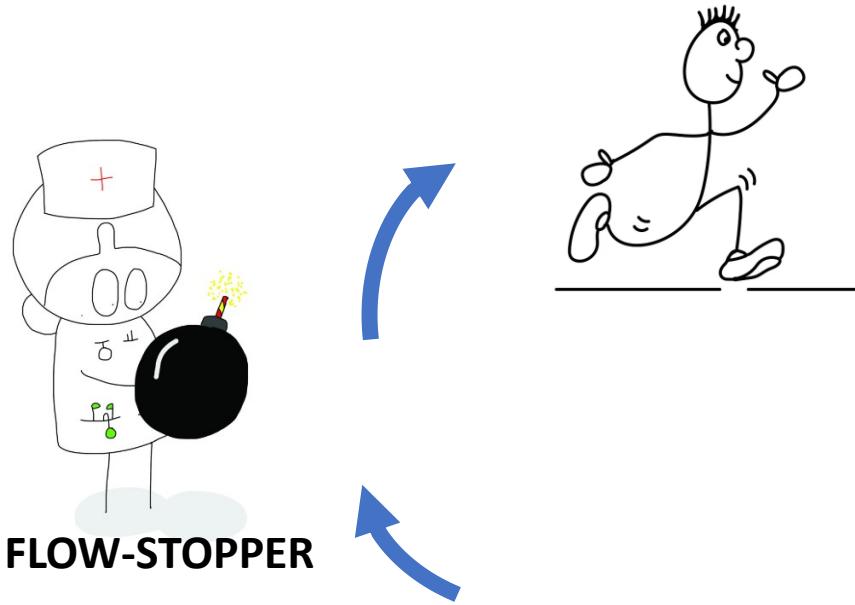

Implementing evidence-based practices in an emergency department:
contradictions exposed when prioritising a flow culture

Jeanette W Kirk and Per Nilsen

Background. An emergency department is typically a place of high activity where practitioners care for unanticipated presentations, which yields a flow culture so that actions that secure available beds are prioritised by the practitioners.

Objectives. How does the flow culture in an emergency department influence nurses' use of a research-based clinical guideline and a nutrition screening routine.

- What does this paper contribute to the wider global clinical community?
 - Understanding the local culture is necessary to realise ambitions

16 • Klinisk Sygepleje • 29. årgang • Nr. 2 • 2015

ORIGINAL ARTICLE

Barriers and facilitators for implementing a new screening tool in an emergency department: A qualitative study applying the Theoretical Domains Framework

Jeanette W Kirk, Ditte M Sivertsen, Janne Petersen, Per Nilsen and Helle V Petersen

Aim. The aim was to identify the factors that were perceived as most important as facilitators or barriers to the introduction and intended use of a new tool in the emergency department among nurses and a geriatric team.

Background. A high incidence of functional decline after hospitalisation for acute medical illness has been shown in the oldest patients and those who are physically frail. In Denmark, more than 35% of older medical patients acutely admitted to the emergency department are readmitted within 90 days after discharge. A new screening tool for use in the emergency department aiming to identify patients at

What does this paper contribute to the wider global community?

- Culture forms professional role and identity, actions and sense making and provides different ways to perceive barriers and facilitators linked to new screening tools

IMPLEMENTERINGSSTRATEGIER

- Udvælg implementeringsstrategier der skal understøtte implementeringen.

Implementation strategies definition:

“Methods or techniques used to enhance the adoption, implementation and sustainment of a program or practice”.

Over 73 strategier er identificeret, fx undervisning, audit & feedback.

Co-designing implementation strategies for the WALK-Cph intervention in Denmark aimed at increasing mobility in acutely hospitalized older patients: a qualitative analysis of selected strategies and their justifications

Jeanette Wassar Kirk^{1,2*}, Per Nilsen³, Ove Andersen¹, Byron J. Powell⁴, Tine Tjørnhøj-Thomsen⁵, Thomas Bandholm^{1,6,7} and Mette Merete Pedersen¹

Abstract

Background: Selecting appropriate strategies to target barriers to implementing interventions represents a considerable challenge in implementation research and practice. The aim was to investigate what categories of implementation strategies were selected by health care practitioners and their managers in a co-design process and how they justified these strategies aimed at facilitating the implementation of the WALK-Cph intervention.

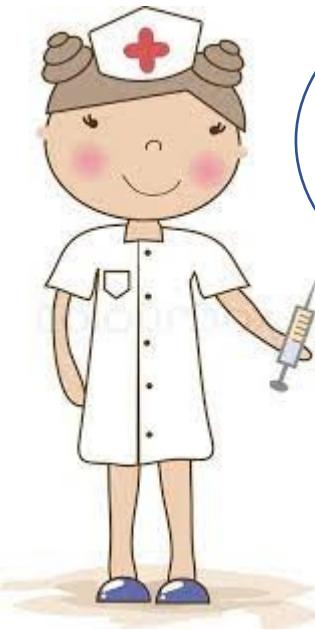

Methods: The study used a qualitative research design to explore what implementation strategies were selected and the justifications for selecting these strategies. Workshops were used because this qualitative method is particularly well suited for studying co-design processes that involve substantial attention to social interaction and the context. Data were 1) analyzed deductively based on the Proctor et al. taxonomy of implementation strategies, 2) categorized in accordance with the ERIC compilation of implementation strategies by Powell et al., and 3) analyzed to examine the justification for the selected strategies by the Proctor et al. framework for justifications of implementation strategies.

Results: Thirteen different types of implementation strategies were chosen across two hospitals. The deductive

Implementeringsstrategier

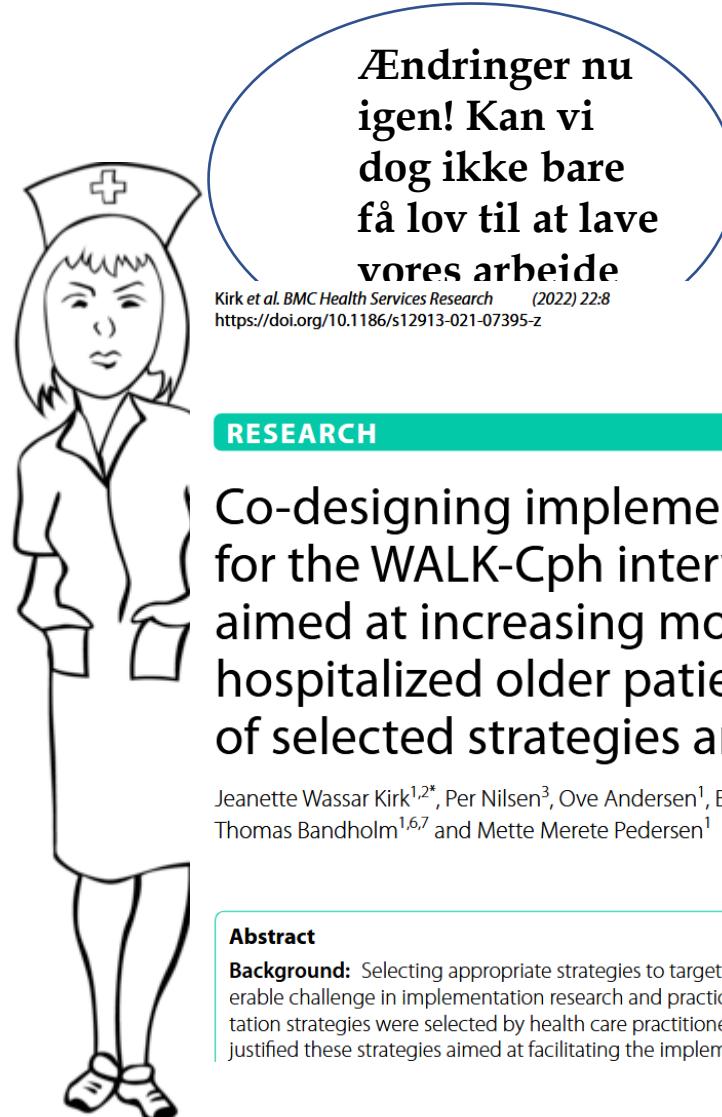

Strategy	Effect size	Studies
Printed educational material (n=23)	4.3% (range -8.0% to +9.6%)	Farmer et al., 2011
Educational meetings (n=81)	6.0% (IQR +1.8% to +15.3%) Larger effects when attendance high, for mixed interactive and didactic meetings and interactive meetings. Smaller effects for complex behaviours, less serious outcomes	Forsetlund et al., 2009
Educational outreach (n=69)	4.8%-6.0% (IQR +3.0% to +16.0%) Effects less certain for changing more complex behaviours	O'Brien et al., 2008
Local opinion leaders (n=18)	12.0% (IQR +6.0% to +14.5%)	Flodgren et al., 2010
Audit and feedback (n=118)	5.0% (IQR +3% to +11%) Larger effects if low baseline compliance	Jamtvedt et al., 2010
Reminders (n=28)	4.2% (IQR +0.8% to +18.8%)	Shojania et al., 2011
Tailored interventions (n=12)	OR 1.52 (95% CI 1.27 to 1.82, p<.001)	Baker et al., 2010

Oilcloth sessions as an implementation strategy: a qualitative study in Denmark

Jeanette Wassar Kirk^{1,2*}, Nina Þórný Stefánsdóttir¹, Byron J. Powell³, Mette Bendtz Lindstroem¹, Ove Andersen^{1,4,5}, Tine Tjørnhøj-Thomsen⁶ and Per Nilsen⁷

Abstract

Background: The aim of this study was to explore healthcare professionals, managers, and other key employees' experiences of oilcloth sessions as a strategy when implementing new emergency departments in Denmark, based on their participations in these sessions. The study addresses the importance of securing alignment in implementation strategies. Too often, this does not get enough attention in the literature and in practice. In this study, alignment among components was achieved in an educational implementation strategy called oilcloth sessions.

Methods: The study is based on participants' observations of 13 oilcloth sessions and follow-up via 53 semi-structured interviews with the board of directors, managers, and key employees from the present emergency depart-
